Meta Tags

```html
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="UTF-8" /> //Ensures
    all characters are displayed correctly
    <meta http-equiv="X-UA-Compatible" content="IE=edge" />
    //For IE compatibility
    <meta name="viewport"  \
    // Responsive design for mobile devices
    content="width=device-width, initial-scale=1.0" />
    <meta name="description"
    //summary of your page
    content="A simple HTML document with meta tags" />
    <meta name="keywords"
     content="HTML, meta tags, example" />
    <meta name="author"
    content="Your Name" />
    <meta name="robots"
     content="index, follow" />
    <meta name="theme-color"
    content="#ffffff" />
     // Make your website look good on  social media
    <meta property="og:title"
    content="Meta Tags Example" />
    <meta property="og:description"
     content="An example of using meta tags in HTML" />
    <meta property="og:image"
    content="https://example.com/image.jpg" />
    <meta property="og:url"
    content="https://example.com" />
    <meta name="twitter:card" content="summary_large_image">
    <title>Meta Tags</title>
  </head>
  <body>

  </body>
</html>
```

@eshaaldev

Key Tips

Always keep meta tags in the <head>

Keep description under 160 characters

Use Open Graph if you ever plan to build a portfolio or blog

@eshaaldev

Aria Label

(Accessible Rich Internet Applications) Aria
Makes your websites screen-reader-friendly

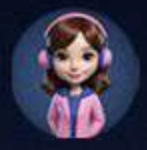
```
<button aria-label="Close menu">X</button>
```

Dev Tools

These tools are built in for every browser that help in:

Inspect & edit HTML/CSS
Debug JavaScript
Optimize performance
Simulate mobile views

Shortcut: F12 or Ctrl+Shift+I



@eshaaldev

Panels in DevTools

Elements – Inspect and live-edit your HTML and CSS structure.

Console – Run JavaScript commands and view errors or logs in real time.

Sources – Debug JS with breakpoints and step through your code line by line.

Network – Monitor all requests, file loads, and network performance.

Device Toolbar – Simulate mobile devices and test responsive layouts.

Performance – Analyze page speed and render bottlenecks in detail.

Application – Manage cookies, local storage, session storage, and service workers.

Lighthouse – Run audits for SEO, accessibility, best practices, and performance.

Security – View SSL certificates, HTTPS info, and check for mixed content issues.

Memory – Detect memory leaks and inspect JavaScript memory usage.
